Yes

[MSG No:5]

No

Yes

Install Apache Version 2.2.29

Upgrade Apache to 2.2.29

Install JobFlow

Finish Installation

[1]: This application requires Apache 2.2 and above. Lower version of apache is already installed. Please uninstall or upgrade to continue.
[2]: This application required Apache to be running on port 80. It is configured currently on a different port. Please configure it on port 80 or uninstall and try again.
[3]: An update of the Apache server is available. Updating may cause some Apache settings to be lost. Before updating, you may want to back up settings for the Apache server. Do you want to update Apache now?
[4]: Currently %s is using port 80. Make sure Fiery JobFlow has exclusive access to port 80 and try again.
[5]: "Fiery JobFlow is a browser-based application hosted on the open-source Apache Web Server, which will be installed on your computer. To provide full Fiery JobFlow services to other users, make sure your computer is accessible via the network."
